

MVPD INSURANCE CAMPAIGN ANALYSIS

Progressive's *Drive Into Tomorrow*
Campaign Performance, Brand-Lift, and Strategic Insights

Group 3- Aayushi Patel, Anisha Jain & Nicole Chatham
December 2025

ANALYSIS OVERVIEW

OBJECTIVE

Evaluate the effectiveness of the Progressive: Drive Into Tomorrow MVPD campaign by comparing control vs. exposed performance, benchmarking against Progressive industry norms and brand norms, and identifying key demographic and behavioral insights.

APPROACH

1. Dataset & Focus

- Analyzed MVPD insurance dataset with Control vs Exposed groups across major brands.
- Primary focus on Progressive – “Drive Into Tomorrow” campaign.

2. Metrics & Benchmarking

- Assessed brand funnel metrics.
- Built industry vertical norms and Progressive brand norms.

3. Segmentation & Testing

- Conducted demographic segmentation across age, gender, ethnicity, income, and ZIP.
- Applied statistical testing to validate significance of observed lifts.

4. Output

- Insights used to shape data-backed strategic advertising recommendations.

OVERALL CAMPAIGN PERFORMANCE

- Gains in ad awareness and digital experience indicate strong initial engagement with the campaign’s creative and messaging.
- Modest movement on lower-funnel, emotional attributes (Trustworthiness and Ease of Claims) highlight an opportunity to deepen emotional credibility in future iterations of the ad.

INDUSTRY NORMS

- *Drive Into Tomorrow* performs better than industry norms, but does not reach statistical significance in metrics yet.
- *Drive Into Tomorrow* has the strongest lift in Digital Experience, but needs to differentiate itself from competitors in trust-building components.

Drive Into Tomorrow Shows Broad Lift Advantage vs. Industry Norms

Drive Into Tomorrow exceeds industry norms on 8 of 9 lift measures, but the differences remain below statistical significance thresholds given equal sample sizes (n=250 each).

BRAND LEVEL NORMS

Lift Analysis: Progressive vs Competitors

Progressive outperformed both Geico and State Farm across most brand metrics. It achieved the **highest lift in ad awareness and purchase intent**, showing that its campaign was not only noticed but also effective in driving consumer action. Progressive also outperformed competitors in **recommendation intent and held steady in trustworthiness**, making it the strongest overall performer in this comparison.

CAMPAIGN PERFORMANCE BY GENDER

Female: Control (n= 140)
Exposed (n=140)

Male: Control (n= 98)
Exposed (n=98)

Non-Binary: Control (n=12)
Exposed (n=12)

Campaign Impact by Gender x Brand Metrics

All genders show positive movement across awareness, favorability, and intent.

Females display **strongest Ad Awareness lift (+0.22)** and moderate intent growth.

Males show meaningful improvement in **Ad Awareness (+0.24)** & **Purchase Intent (+0.15)**, indicating good message resonance.

Non-binary respondents show high baseline **awareness (3.50)** & **purchase Intent(+0.17)** but minimal incremental lift, suggesting plateaued efficiency.

Favorability increases slightly for all groups, reinforcing cross-gender consistency in campaign appeal.

CAMPAIGN PERFORMANCE BY GENDER

Female: Control (n= 140)
Exposed (n=140)

Male: Control (n= 98)
Exposed (n=98)

Non-Binary: Control (n=12)
Exposed (n=12)

Campaign Impact by Gender x Brand Attributes

Females demonstrate **notable gains in Digital Experience (+0.19)** and **Pricing Transparency (+0.1)**.
Males show **balanced improvement** across all attributes, particularly in **Digital experience (+0.21)**.
Non-binary respondents exhibit **large increases in Digital experience (+0.16)** & a strong lift in **Trustworthiness (+0.16)**, suggesting the strongest emotional shift.

CAMPAIGN PERFORMANCE ACROSS AGE GROUPS

- **Strongest awareness lift** occurs among younger adults, especially **18–24** (+0.51) and **25–34** (+0.44), indicating high creative memorability in early-life segments.
- **Brand Awareness** increases across all groups, with **35–44** showing the most robust improvement (+0.13).
- **Brand Favorability** demonstrates stable, modest gains for most age segments, with the exception of 45–54, which shows a notable increase (+0.12).
- **Purchase Intent** peaks among **25–34**, rising from +0.22, the **largest intent gain** across all ages, signaling strong persuasion in this segment.
- Older adults (55–64) show negative lift across Awareness and Favorability, but Purchase Intent rises slightly (+0.1), showing limited but present response.
- Overall, the campaign is most effective among **18–34**, with diminishing returns as age increases, highlighting clear generational differences in engagement and responsiveness.

Control/Exposed?
■ Control
■ Exposed

- **18–24 and 25–34** groups show the largest improvements across **Digital Experience** and **Pricing Transparency**, suggesting strong alignment with younger audiences.
- Recommendation Intent rises among younger adults, especially 25–34 (+0.14), showing increased likelihood to advocate the brand.
- Middle-age groups (35–54) show moderate, stable lifts, confirming reliable but less dramatic shifts.
- The 55–64 segment shows minimal lift, with exposed scores declining slightly in some metrics, indicating lower responsiveness to this creative.
- Overall pattern highlights strongest impact among younger consumers, with diminishing returns as age increases.

Control/Exposed?

■ Control
 ■ Exposed

- The campaign shows consistent positive lift across all employment segments, with exposed respondents **outperforming** control in every metric.
- **Ad Awareness** lift is strongest among Retired (+0.26) & Self-employed (+0.24).
- **Brand Awareness** increases modestly but uniformly across all employment types.
- **Brand Favorability** and **Purchase Intent** rise steadily, with **Self-employed** and **Students** showing especially strong intent movement.
- Overall, the campaign achieves broad resonance, effectively reaching diverse employment categories without performance drop-off.

BRAND ATTRIBUTE SHIFTS BY EMPLOYMENT STATUS

Full-Time: Control (n= 109)
Part-Time: Control (n= 41)
Retired: Control (n=9)
Self-employed: Control (n=33)

INCOME GROUP INSIGHTS BY BRAND METRICS

Under 30k: Control (n= 47) Exposed (n= 47)
30k-59k: Control (n= 91) Exposed (n= 91)
60k-99k: Control (n=70) Exposed (n=70)
100k-149k: Control (n=33) Exposed (n=33)
150k+ : Control (n=9) Exposed (n=9)

- Under \$30k and \$30–\$59k segments show moderate but steady gains across metrics, suggesting broad mass-market resonance.
- Middle-income (\$60–\$99k) respondents show the strongest and most uniform lifts, particularly in Purchase Intent (+0.1) and **Recommendation Intent** (+0.14).
- \$100k–\$149k shows slight declines in **Favorability & Trust**, indicating muted response to messaging.
- \$150k+ segment shows mixed outcomes: strong gains in **Recommendation Intent** (+0.11) but declines in **Trustworthiness** (+0.22), suggesting higher-income audiences are less persuaded overall.
- Overall, the campaign resonates most effectively with middle-income consumers, who show improved sentiment and higher likelihood to consider the brand.

INCOME GROUP INSIGHTS BY BRAND ATTRIBUTES

Under 30k: Control (n= 47)
30k-59k: Control (n= 91)
60k-99k: Control (n=70)
100k-149k: Control (n=33)
150k+ : Control (n=9)

Exposed n= 47)
Exposed (n= 91)
Exposed (n=70)
Exposed (n=33)
Exposed (n=9)

- **Digital Experience** lifts consistently across income groups, strongest among **\$150k+ (+0.34)** and Under **\$30k (+0.25)**.
- **Ease of Claims** increases for lower-income (<\$30k) and middle-income (\$60–\$99k) groups, but declines for \$30–\$59k and \$100k–\$149k.
- **Recommendation Intent** rises for most income groups, with highest lift among the \$150k+ segment (+0.11).
- **Trustworthiness** results are mixed: positive in almost all segments & declining in \$150k+.
- These patterns suggest middle-income consumers (especially \$60–\$99k) respond most positively across functional and emotional attributes.

PURCHASE INTENT ACROSS ZIP REGIONS

Campaign Impact by Purchase Intent: Zip Region

The campaign generates consistent Purchase Intent lifts across all five ZIP regions.

West, Northeast, and Southeast show the strongest lift, with exposed scores at ~3.00 vs. ~2.88–2.91 in control. **Southwest** shows the lowest baseline (2.80 control) but still registers meaningful improvement (2.92 exposed). Regional consistency suggests the campaign’s message resonates similarly across diverse geographic markets.

BRAND FAVORABILITY HOTSPOTS AND WEAK SPOTS ACROSS REGIONS

Midwest: Control (n= 56)	Exposed (n= 56)
Northeast: Control (n= 23)	Exposed (n= 23)
Southeast: Control (n=66)	Exposed (n=66)
Southwest: Control (n=50)	Exposed (n=50)
West : Control (n=55)	Exposed (n=55)

- **Indiana shows the highest brand favorability (3.77)** among exposed respondents, suggesting the campaign resonated strongly in that region.
- **Florida reports the lowest favorability (2.33)**, indicating weaker emotional or brand connection with the ad.
- The Midwest overall shows **stronger favorability scores**, with several ZIP codes performing above the national average.
- Southern states (Tennessee, Georgia, Texas) show **mixed performance**, reflecting varied levels of ad effectiveness.
- West Coast states (California, Oregon, Washington) show **moderate favorability**, indicating stable but not standout impact.
- The broad variation across regions suggests **campaign messaging may be aligning better with Midwestern audiences** and less effectively with Southeastern markets.

DIGITAL EXPERIENCE HOTSPOTS AND LOW-PERFORMING REGIONS

- Colorado shows the **highest digital experience score (4.12)** among exposed respondents.
- Texas shows the **lowest digital experience score (2.62)**, indicating weaker campaign impact in that region.
- West Coast states (California, Oregon, Washington) show **moderate digital experience scores**, suggesting steady but not peak engagement.
- Midwest and East Coast regions show **mixed performance**, with several pockets of engagement but no standout high scores.
- The geographic spread indicates that **campaign effectiveness varies significantly by region**, highlighting the need for localized messaging strategies.

Midwest: Control (n= 56)	Exposed (n= 56)
Northeast: Control (n= 23)	Exposed (n= 23)
Southeast: Control (n=66)	Exposed (n=66)
Southwest: Control (n=50)	Exposed (n=50)
West : Control (n=55)	Exposed (n=55)

CAMPAIGN PERFORMANCE ACROSS ETHNICITY SEGMENTS

- All ethnic groups show consistent positive movement, particularly in Ad Awareness and Brand Awareness.
- Hispanic/Latino and Other/Mixed audiences show slightly stronger lifts, though still not statistically significant.
- White audiences show **directional lift** in Ad Awareness.

Asian: Control (n= 20) | Exposed (n=20)
 Black: Control (n= 34) | Exposed (n=34)
 Hispanic/Latino: Control (n=43) | Exposed (n=43)
 Other/Mixed: Control (n=10) | Exposed (n=10)
 White: Control (n=143) | Exposed (n=143)

Stable, Positive Response Across Ethnic Segments

Awareness and purchase intent hold steady or rise consistently for nearly every group; however, lifts do not reach statistical significance at current sample sizes.

CAMPAIGN PERFORMANCE ACROSS ETHNICITY SEGMENTS

- Exposed scores are consistently equal to or higher than controls in most attributes and ethnicities.
- Asian audiences show the greatest decline in Recommendation Intent and Ease of Claims after exposure, with the highest lift in Digital Experience.
- No statistically significant differences arise, meaning that Progressive may need more tailored messaging to drive lift.

Asian: Control (n= 20) | Exposed (n=20)
Black: Control (n= 34) | Exposed (n=34)
Hispanic/Latino: Control (n=43) | Exposed (n=43)
Other/Mixed: Control (n=10) | Exposed (n=10)
White: Control (n=143) | Exposed (n=143)

WHAT THE RESULTS MEAN FOR PROGRESSIVE: KEY FINDINGS AND NEXT STEPS

1. Broad Brand Lift

The campaign drives **broad lift across all brand metrics and attributes**, with the strongest gains in Ad Awareness, Digital Experience, and Purchase Intent.

2. Younger Audience Momentum

Younger audiences (18–34) show the highest levels of responsiveness, especially in Digital Experience and Pricing Transparency, along with meaningful increases in Recommendation Intent.

WHAT THE RESULTS MEAN FOR PROGRESSIVE: KEY FINDINGS AND NEXT STEPS

3. Widespread Positive Response

All gender, ethnic, and employment groups show consistent positive movement, with standout lifts among Females, Hispanic/Latino & Other/Mixed respondents, and Retired/Self-Employed audiences.

5. Opportunities to Improve

Lower lifts in Trustworthiness, Ease of Claims, and older audiences signal new opportunities to strengthen reliability messaging for 55+ consumers.

4. Regional Performance Varies

Campaign resonance varies by region. Midwestern and Western areas outperform, while Southeastern markets present the greatest opportunity for improvement.

EXECUTIVE OVERVIEW OF CAMPAIGN PERFORMANCE

Overall, the *Drive Into Tomorrow* campaign delivered **positive movement across all nine metrics**. The exposed groups consistently outperformed the control groups, and our ad exceeds industry and brand norms, although many incremental lifts have not yet reached statistical significance.

These findings signal a **call-to-action** to refine and refresh messaging to be more emotionally resonant and value-driven, increase media frequency to segments with the highest responsiveness, and to strengthen the digital aspects of the creative that are already excelling.

These insights inform our next five actionable recommendations.

ACTIONABLE RECOMMENDATIONS

1. Strengthen Creative in High-Potential Areas

Progressive should continue developing the ad's storytelling to connect with users on an emotional level, to improve categories that show promise. By crafting richer emotional and value-based messaging, Progressive can accelerate growth in key metrics, such as Purchase Intent and Favorability.

2. Prioritize Younger Audiences (18–34)

Progressive should continue to invest in media engagement and tailor strategies toward the younger segments. Progressive can do this by including platform-specific creative for TikTok, Instagram, and other digital environments where younger audiences actively interact with brands.

3. Expand Regional Optimization

In Southeastern markets where ad resonance is weaker, Progressive should aim to incorporate regional benefits and tailor messaging to the different needs of audiences in this region (ex, flood/rain protection, or heavy commuter traffic). Progressive can also continue to amplify the successful creative elements in high-performing Midwestern and Western regions.

ACTIONABLE RECOMMENDATIONS

4. Reinforce Reliability & Ease of Claims Messaging

Progressive needs to address lower-performing metrics like Trustworthiness and Ease of Claims by incorporating clearer narratives that leave viewers feeling reassured and informed. *Drive Into Tomorrow* should highlight claims support, customer confidence, or its range of coverage, along with easy-to-read pricing visual elements.

5. Invest in Top-Performing Creative Elements

Lastly, Progressive should scale up what's already working! Progressive should increase media spend on high-performing platforms and use high-frequency placements to continue driving exposure. Progressive should also improve UX design and intuitive touchpoints around the ad to enhance the digital journey and encourage users toward purchase with greater ease.

With these steps, we expect to see *Drive Into Tomorrow* accelerate ahead of the competition!

Thank You!
