

ASSIGNMENT 6.1: SNAPCHAT CANADA DRY

BY AAYUSHI PATEL, LU ROTHROCK, AND MARIA ZAIED

OVERVIEW AND APPROACH

- We analyzed control vs. exposed groups using brand metrics (Awareness, Favorability, Purchase Intent). We segmented results by age and gender, compared Canada Dry performance to KDP norms, and identified where the campaign succeeded or underperformed.

CANADA DRY CAMPAIGN OVERALL PERFORMANCE

Campaign Overall performance.

This highlights that people who were exposed to Ad campaign had a little higher average than those compared to controlled for **Ad awareness, Brand Awareness and Purchase Intent**, except for **Brand Favorability**, where **Controlled group** is higher.

- Overall Campaign performance chart shows that **Brand Awareness & Purchase Intent** of the Exposed group are significantly higher than controlled group as well as all other metrics.
- The chart also highlights that somehow **Brand favorability** to the **exposed group** is dramatically lower.

CAMPAIGN PERFORMANCE BY AGE GROUP & GENDER

Campaign performance by age group & Gender

Youth Dominance

Teens (13-17), Young Adults (18-24) & Older group (45+) show the highest engagement, particularly in purchase intent.

Gender Dynamics

Female and Male segments consistently outperform in brand favorability.

Mid-Age Dip

The 35-44 Age Group shows a notable decline in favorability, signaling a need for targeted messaging adjustment.

- Ad Awareness is notably lower in adults, signaling targeting or frequency issues.
- Adults - Male showed low Ad Awareness, resulting in low purchase intent.
- All age group & gender responded well with Brand awareness.

NORMS PARENT COMPANIES' CAMPAIGNS: KEURIG DR PEPPER

AD Results of Parent Companies

- Ad exposure generally increases ad awareness and purchase intent across nearly all brands, with especially strong lifts for 7up Citrus Chill, Hawaiian Punch Lava Burst, and Dr Pepper Mango Habanero.
- Changes in brand awareness and favorability are more mixed: A&W Frosted Maple Float and Canada Dry Glacier see meaningful gains, while brands like Dr Pepper Mango Habanero show **slight declines in favorability after exposure**.
- Hawaiian Punch stands out with extremely high favorability in both groups, suggesting **strong baseline perception independent of the ad**.

Canada Dry Glacier vs Industry Norm

INDUSTRY NORMS

- Exceptional Visibility: Brand Awareness outperformed the industry norm by over 450%, indicating highly effective campaign reach.
- Strong Purchase Driver: Purchase Intent shows a massive 437% lift, suggesting the product successfully converts interest into action.
- Sentiment Challenge: Despite high visibility, Brand Favorability saw a critical decline of -1800%, indicating a polarizing reception that needs immediate address.

Metric	Norm	Lift	% Diff
Ad Awareness	0.54	0.08	14.80%
Brand Awareness	0.16	0.73	456.30%
Brand Favorability	0.02	-0.36	-1800%
Purchase Intent	0.16	0.7	437.50%

NATURAL REFRESHMENT

DESIGN RECOMMENDATION

To reverse the negative brand favorability, we must pivot from the isolating "Arctic" theme to an inviting, flavor-forward aesthetic.

Visual Warmth

Replacing stark blues with sun-drenched golden hues to evoke immediate comfort.

Ingredient Authenticity

High-fidelity imagery of fresh fruit and condensation to drive appetite appeal.

Relatable Context

Grounding the product in realistic, enjoyable moments of consumption.

CONCLUSION AND RECS

- **Targeting:**
 - Prioritize 25–44 age group across future media placements, they show the biggest lift in PI.
- **Creative:**
 - Shift from cold Glacier aesthetic to refreshing summer vibes to regain favorability.
 - Highlight refreshing nature of soda.
 - Include real fruit to drive appetite and taste (sensory) appeal.
- **Campaign Strategy:**
 - Use A/B testing to refine the visuals for mid-age demographics (35-44) who showed a sharp decline in favorability.
 - Increase frequency/exposure to raise Ad Awareness among Adults, especially adult males.
